DUST CONVERSION PROTOCOL

# Your wallet, finally clean.

Convert fragmented on-chain balances into usable capital.

⊙ Solana

⊙ Base

Monad ↗

sweepr .

THE PROBLEM

# Wallets become messy.

Fragmented balances accumulate across chains – idle, unusable, forgotten.

01

## Gas Trap

Gas fees often exceed the value of small token balances – making them impossible to convert profitably.

02

## Locked Liquidity

Dust sits idle across wallets. Capital that should be working stays fragmented and unreachable.

03

## Capital Inefficiency

As multi-chain activity grows, so does wallet clutter. Users have no simple tool to recover value.

Millions of wallets have dust balances – none of them have a clean, non-custodial solution.

sweepr.

THE SOLUTION

# One sweep. Clean balance.

Sweepr converts fragmented dust into USDC, SOL or ETH — non-custodial, one action.

## 01 Connect

Non-custodial wallet connection. Sweepr scans all token balances across Solana and Base.

## 02 Preview

See exact output, gas cost, slippage and timing before confirming. No surprises.

## 03 Sweep

Batched transactions routed via proprietary aggregator. Optimal paths, capital unlocked.

sweepr\_preview.json

```
// wallet 0xA1b2...F9e0
{
  "dust_tokens": 14
  "input_value": "$18.42"
  "estimated_out": "$17.31 USDC"
  "protocol_fee": "~3%"
  "custody": false
}
```

sweepr .

PRODUCT

# Wallet Balance Optimization.

A new category – converting idle dust into productive capital.

## Proprietary Aggregator

Intelligent swap routing with liquidity discovery and batched transactions for maximum output.

## Safety Layer

Suspicious tokens flagged before execution. Slippage protection with user override controls.

## Multi-Chain Native

Live on Solana and Base. Monad and further EVM expansion on the roadmap.

## Non-Custodial Always

Your keys, your assets. Smart contract execution only – fully verifiable on-chain.

sweep.

OPPORTUNITY

# The market is ready.

Multi-chain activity is rising. Users expect automation. The category is empty.

**Millions+**

Wallets with dust balances

**Growing**

Multi-chain wallet activity

**~3%**

Protocol fee per sweep

- **Category gap** — No dominant non-custodial dust conversion protocol exists today.
- **User demand** — Users accumulate dust passively — they need automation, not manual swaps.
- **Timing** — Multi-chain fragmentation accelerates. The problem grows every day.

sweep .

SOLANA MARKET DATA

# 346M+ wallets. \$121M in dust. On Solana.

On-chain data from Dune Analytics · Last 30 days · Solana network

346M+

Wallets with \$0-\$20 dust

\$121M

Total dust value on Solana

\$108K+

6-month revenue potential\*

- **\$0-\$3 segment** — 338M wallets · \$56M total dust · avg \$0.17/wallet
- **\$0-\$10 segment** — 344M wallets · \$91M total dust · avg \$0.26/wallet
- **\$0-\$20 segment** — 346M wallets · \$121M total dust · avg \$0.35/wallet

sweepr .

BUSINESS MODEL

# Simple, transparent revenue.

Users pay gas. Protocol earns a small fee on every successful sweep.

## EXAMPLE SWEEP

Input value	\$100 dust
Protocol fee (3%)	- \$3.00
Gas estimate	- \$0.18
User receives	\$96.82 USDC
Protocol earns	~\$3.00

## Revenue Mechanics

- ~3% protocol fee on each sweep
- Users pay their own gas costs
- No subscription, no platform fee
- Scales with swap volume
- Aligned with user success

sweepr .

ROADMAP

# What's next.

From MVP to multi-chain protocol – with AI features on the horizon.

## Phase 1

Now

- Development & testnet
- Solana + Base live
- Core sweep engine

## Phase 2

Q3 2025

- Marketing launch
- Protocol partnerships
- EVM expansion

## Phase 3

2026

- AI portfolio tools
- Automated wallet org
- Monad integration

→ AI features: automated wallet organization, smart execution tools, cross-chain portfolio optimization.

sweepr .

TEAM

# Built by builders.

A focused team shipping fast – engineers, designers, and operators.

6

Team members

Engineering

Design

Marketing & SM

## Ship fast

Rapid iteration, no bureaucracy.

## Non-custodial first

User assets stay with users.

## Transparent fees

No surprises, ever.

## DeFi native

Built for crypto-native users.

sweepr .

# Stop leaving value behind.

Dust doesn't disappear. Sweepr converts it.
